DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to a promoter, DNA constructs and vectors comprising the promoter, host cells and plants comprising the DNA construct, and a method of using the construct to induce expression of a heterologous nucleic acid in a plant, classified in class 536, subclass 24.1.
- II. Claims 18-30, drawn to a nucleic acid encoding a protein of SEQ ID NO:2, DNA constructs and vectors comprising the nucleic acid, host cells and plants comprising the DNA construct, and a method of using the construct to induce expression of a nucleic acid in a plant, classified in class 800, subclass 279.
- III. Claims 31-38, drawn to a method of controlling a plant pathogen by topical application of a protein of SEQ ID NO:2 and a protein of SEQ ID NO:2, classified in class 514, subclass 2.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions, and different effects. The methods of each group have different starting materials, different method steps, and different end products. Additionally, the promoter of Group I is a nucleic acid with a different sequence than the nucleic acid of Group II.

Inventions I and III are unrelated. The different inventions have different modes of operation, different functions, and different effects. The methods of each group have different

starting materials, different method steps, and different end products. Additionally, DNA and protein differ in composition, structure and function.

Inventions II and III are unrelated. The different inventions have different modes of operation, different functions, and different effects. The methods of each group have different starting materials, different method steps, and different end products. Additionally, DNA and protein differ in composition, structure and function.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search, and classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
